Variable Width

In the examples above we had a fixed width of the container. In one example it was 800px the other fit the width of the screen. In this example we will limit the width to be variable width of anything from 700px to 1200px.

```
<style>
    #container {
        min-width: 700px;
        max-width: 1200px;
    }

    #gloablNav {
        width: 200px;
        float: left;
    }

    #contentArea {
        margin-left: 200px;
    }

    #footer {
        clear: both;
    }
</style>

<div id="container">
    <header id="globalHeader"></header>
    <nav id="globalNav"></nav>
    <article id="contentArea"></article>
    <footer id="gloablFooter"></footer>
</div>
```
